A way of classifying the economic growth of countries is to divide them into three groups: (a) industrialized, (b) developing, and (c) less-developed nations. Industrialized nations have economies characterized by a healthy climate for private enterprise (business) and a consumer orientation, meaning the business climate focuses on meeting consumers' long-term wants and needs.

This book evaluates the policies of least developed countries (LDCs) and the decisions that they now face against the backdrop of the changes in the structure of the global economy and in the globalization process itself. It analyses possible scenarios and alternative trade and growth policies that are likely to affect the LDCs and their poor population, in order to draw lessons for future policies. The book has 6 chapters and a subject index.

The benefits of globalizations have failed to reach the Least Developed Countries (LDCs) for both domestic and international reasons. Internationally, LDCs continue to face daunting structural constraints, some of which have been inherited from their colonial past. This publication comprises the papers and statements presented at the United Nations Ministerial Conference of the LDCs which draw attention to issues and challenges facing LDCs and provide policy makers, practitioners and academics in LDCs with important policy guidance on the way forward.

Over the past two decades, the percentage of the world's population living on less than a dollar a day has been cut in half. How much of that improvement is because of—or in spite of—globalization? While anti-globalization activists mount loud critiques and the media report breathlessly on globalization's perils and promises, economists have largely remained silent, in part because of an entrenched institutional divide between those who study poverty and those who study trade and finance. Globalization and Poverty bridges that gap, bringing together experts on both international trade and poverty to provide a detailed view of the effects of globalization on the poor in developing nations, answering such questions as: Do lower import tariffs improve the lives of the poor? Has increased financial integration led to more or less poverty? How have the poor fared during various currency crises? Does food aid hurt or help the poor? Poverty, the contributors show here, has been used as a popular and convenient catchphrase by parties on both sides of the globalization debate to further their respective arguments.

Globalization and Poverty provides the more nuanced understanding necessary to move that debate beyond the slogans.

The new phase of challenging globalization is characterized by economic multipolarity with significant weight of the South. Due to dynamism and openness, today the largest and the rapidly-growing developing countries play a fundamental role in stabilizing the world economy. This second edition of the UNCTAD publication focuses on increasing of analytical emphasis and explains new and emerging economic trends. The publication provides brief outline of data and information, and describes UNCTADs independent research in the areas of finance, technology, investment and sustainable development.

An honest discussion of free trade and how nations can sensibly chart a path forward in today's global economy Not so long ago the nation-state seemed to be on its deathbed, condemned to irrelevance by the forces of globalization and technology. Now it is back with a vengeance, propelled by a groundswell of populists around the world. In Straight Talk on Trade, Dani Rodrik, an early and outspoken critic of economic globalization taken too far, goes beyond the populist backlash and offers a more reasoned explanation for why our elites' and technocrats' obsession with hyper-globalization made it more difficult for nations to achieve legitimate economic and social objectives at home. Ranging over the recent experiences of advanced countries, the eurozone, and developing nations, Straight Talk on Trade charts a way forward with new ideas about how to reconcile today's inequitable trends with liberal democracy and social inclusion.

To mark its 40th anniversary, UNCTAD has produced this statistical reference book to provide readers with key development-related data on the world economy and the growth prospects of developing countries in the context of globalisation. It contains basic information on a range of issues and trends including international trade, transnational corporations, foreign direct investment, external finance and debt, production and international trade of commodities, merchandise and services, information and communication technology, together with relevant facts about population.
