This book is a completely revised and rewritten edition of "Electric Contacts Handbook" published in 1958. A large number of new investigations are considered, and many of the basic theories are revised in detail and even in general. The body of information had to be limited as it was not advisable to increase the volume of the book. In particular, no attempt was made to cover all of the practical applications. They appear as examples following concentrated explanations of basic phenomena. As in several branches of technology, the solutions of problems arising in the field of electric contacts involve insight into various disciplines of physics. It is felt that reviews of some of those topics, especially adapted to electric contact phenomena, are welcome to many readers. For example, chapters have been devoted to the structure of carbon, the band theory of electric conduction in solids, certain problems in statistics, and the theory of the electric arc. As regards arc problems, new ideas have been introduced. In order to make the main text less cumbersome, such reviews are presented as appendices. Throughout this edition, the mksa-unit system is used in accord with the latest recommendation for standardization of units in scientific and technical writings. The chapter "History of Early Investigations on Contacts" forming Part IV in the preceding edition of 1958 has not been repeated in this book.

Do you feel like you're crawling through your story, struggling for each paragraph? Would you like to get more words every day without increasing the time you spend writing or sacrificing quality? It's not impossible, it's not even that hard. This is the story of how, with a few simple changes, I boosted my daily writing from 2000 words to over 10k a day, and how you can, too." Expanding on her highly successful process for doubling daily word counts, this book--a combination of reworked blog posts and new material--offers practical writing advice for anyone who's ever longed to increase their daily writing output.
