Job Order Costing - Guide of How to Calculate Job Order Costs

The per unit cost of a particular job is computed by dividing the total cost allocated to that job by the number of units in the job. The per unit cost formula is given below:

$$\text{Per unit cost} = \frac{\text{Total cost applicable to job}}{\text{Number of units in the job}}$$

Online Library

Managerial

Accounting units in the job. Job order costing is extensively used by companies all over the world.

~ Chapter 2 "Job Order Costing" Test ...

Basic Job Costing. Job costing (also called job order costing) is best suited to those situations where goods and services are produced upon receipt of a customer order, according to customer specifications, or in separate batches. For example, a ship builder

Online Library Managerial

would likely accumulate costs for each ship produced. An aircraft manufacturer would find this method logical. Construction companies and home builders would naturally gravitate to a job costing approach. Each job is somewhat unique.
